

PERU

Peru is South America's third largest country, covering 1,285,215 sq. km., and can be divided into three distinct geographic regions. The best known of these is the central high sierra of the Andes, with its massive peaks, steep canyons, and extraordinary pre-Columbian archaeological sites. The Andes are also the site of the most fascinating pre-Columbian cities of South America-like the great city of the clouds, Machu Picchu.

The Andes are by no means the only region to visit in Peru. Also of great interest is Peru's narrow, lowland coastal region, a northern extension of the Atacama Desert. Although the Atacama is generally known as the most arid region on the planet, the climate along Peru's shores is made cooler and less dry by a dense fog created by the collision of the frigid waters of the Humboldt Current with the heated sands of the Atacama.

Peru's third great region is the dense forest that surrounds the headwaters of the Amazon beneath the eastern slopes of the Andes. This part of the country is for the most adventurous and intrepid travelers. In fact, the region's capital of Iquitos is accessible only by air or by boat up the Amazon.
